

## Wagon Testing SET

It is a system got using the top-plat of a Wagon as an experiment plate. Since other Articulated arms are equipped with the TempTest Head it is not installation position of an Experiment subject. Moreover, the soft contact To a subject is possible by adopting a precision Movable stage at the tip of an arm. By carrying all the peripheral equipment in a Wagon, the minimum occupancy area is realized And movement of convenience improves also in A required environment.

## SET UP Model I
